On page 5, last paragraph, please amend the specification as follows:

Decryption ~~module 215~~module 250 may receive data to be decrypted from destination-based folders 232, 234. For example, encrypted data entering user system 200 may be directed to folders based on the data's destination within user system 200. Thus, data directed to destination C within user system 200 may be placed in the destination C received folder 232. Encrypted data having a destination of destination D within user system 200 may be placed in the destination D received folder 234.
